

Year 1 Work, Week commencing 29th June- Mr Boyd

I hope everyone is ready for hopefully a cooler week. As lovely as the sun was, I am ready for something a little cooler...

I have, of course, got another excellent week packed with fantastic activities including:

- English
- Spelling
- Maths
- Science

Thank you again everyone who sent me pictures of work or simply of your children enjoying a variety of activities at home. I know I say this every week, but I cannot put into words how much it makes me smile seeing the children so busy.

All the best,

Mr Boyd

English

This week in English we are reading *The Naughty Bus* by Jan Oke. It is a lovely story about a red toy bus which goes on its first adventure with a young boy. You will see that they both get into lots of trouble and learn some lessons along the way.

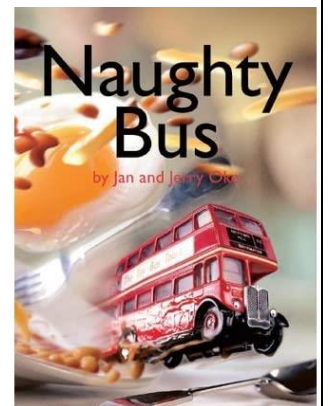

The children will help *The Naughty Bus* to finish his story because it has all been muddled up. They will need to add new pictures and write in missing words.

Then, the children will create a new ending for the story, as the rescue truck is busy saving something else.

Finally, they will have the opportunity, to create a new story for *The Naughty Bus*, called *The Naughty Bus Returns*. I encourage the children to create a new story and add their own illustrations. If by chance you have a red bus at home, then it would be great to take some new pictures with the toy bus.

Spellings

Spellings this week have again all been inspired by *The Naughty Bus*.

Maths

Maths has been set out the same way as usual.

We are moving on to Ordering Numbers to 100 and including One more and One Less.

If your child still wants to practise a little more with comparing numbers, BBC Bitesize comes to the rescue again with some nice activities.

<https://www.bbc.co.uk/bitesize/articles/zwbwr2p>

The children are of course welcome to use hundred squares to help them if they struggle. However, if the child can do it without, then I would encourage them to work without! I would also always love the children to use as much physical equipment as possible as this really helps with understanding maths in greater detail.

If you're looking for another challenge, then BBC Bitesize has teamed up with White Rose to create some challenges for you.

Science

In Science, we're starting to look at the human body. I would like the children to have a go at labelling a human body in as much detail as they can. I think that the children should try to label the body first and then do some research to add further detail.

There is also an opportunity for the children to create a table which includes the hair and eye colour of family members. It would be great if they could ask as many family members as possible and see if they notice any patterns.

I have also included some instructions for making a human arm using cardboard and rubber bands which is always good fun.

Lastly, there is a research quiz for the children to find out more about the amazing people who live on the Earth.

You might find out some fantastic facts along the way.

Have a great week.

Mr Boyd
