

There are many amazing creatures living on planet Earth. In Oliver Jeffers' book 'Here we are', we saw some of these amazing animals. This week, we are going to identify some of these animals and figure out what group they belong to.

Before we look at groups of animals, I've got a starter activity for you to show off your amazing knowledge of animals.

Circle the correct name then colour in the animal.

 <p>fish bird snake</p>	 <p>dog cat monkey</p>	 <p>bird fish lion</p>
 <p>lizard tortoise bird</p>	 <p>penguin whale fly</p>	 <p>monkey elephant alligator</p>
 <p>hamster dolphin ladybird</p>	 <p>hyena eel frog</p>	 <p>lion owl bat</p>
 <p>lizard butterfly cat</p>	 <p>beetle sheep duck</p>	 <p>whale worm goat</p>

We are going to look at 6 groups of animals:

- Mammals
- Reptiles
- Amphibians
- Fish
- Birds
- Insects

I would like you to do a little bit of research and tell me something about each of these groups. It would also be great if you drew a picture of an animal from that group.

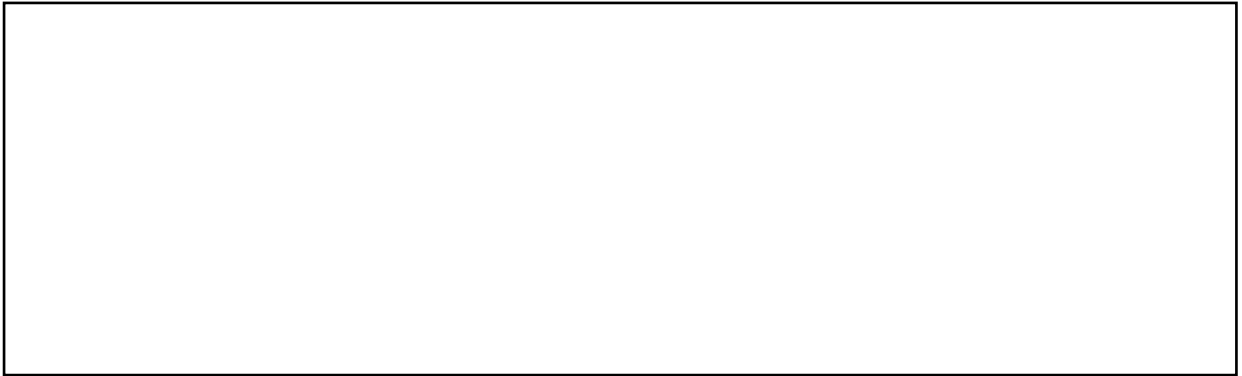

Mammals

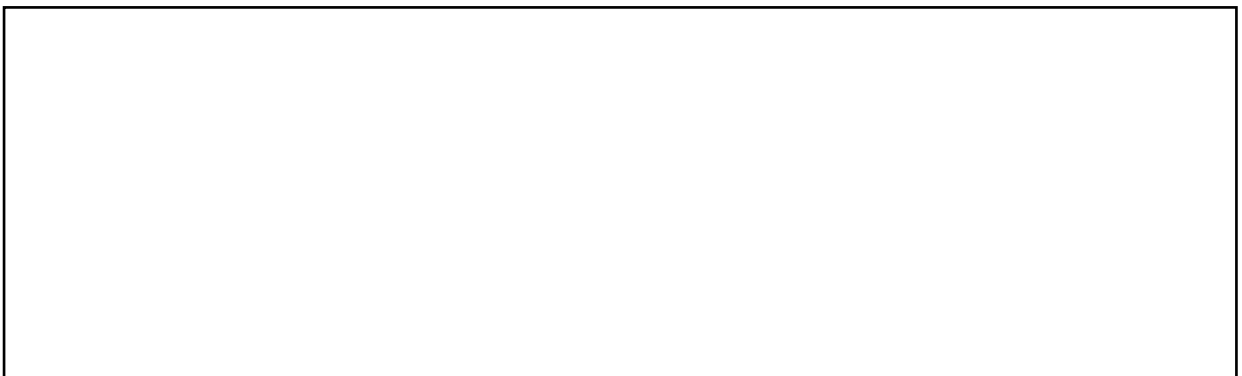

Reptiles

Amphibians

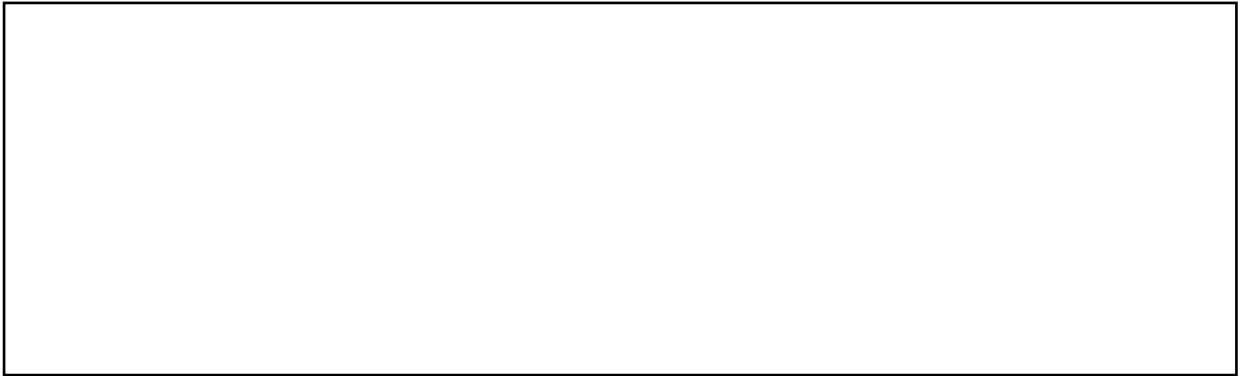

Fish

Birds

Insects

Challenge

Can you tell me something about invertebrates?
