

When we say 3×4 , what does that mean?

It means that we have 3 "lots of" 4, or 3 4s.

Another way of writing this multiplication number sentence is as a repeated addition number sentence. This is exactly what it says on the tin! You repeat an addition!

So 3×4 (or 3 4s) could be written as

$4 + 4 + 4$ because I have 3 4s or 3 lots of 4!

Let's have a go at what it would look like for our 2 times tables... *Fill in the gaps:*

$$1 \times 2 = 2$$

$$2 \times 2 = 4 \text{ OR } 2 + 2 = 4$$

$$3 \times 2 = 6 \text{ OR } 2 + 2 + 2 = 6$$

$$4 \times 2 = 8 \text{ OR } \underline{\hspace{10cm}} = 8$$

$$\underline{\hspace{10cm}} = 10 \text{ OR } 2 + 2 + 2 + 2 + 2 = 10$$

$$6 \times 2 = 12 \text{ OR } \underline{\hspace{10cm}}$$

$$\underline{\hspace{10cm}} \text{ OR } 2 + 2 + 2 + \underline{\hspace{10cm}} = 14$$

$$16 = \underline{\hspace{10cm}} \text{ OR } 2 + 2 + 2 + 2 + 2 + 2 + 2 + 2 = 16$$

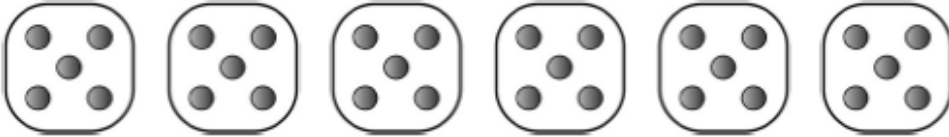

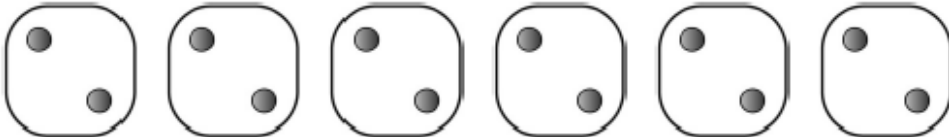

$$\underline{\hspace{10cm}} = 18 \text{ OR } 18 = \underline{\hspace{10cm}}$$

$$2 \times 10 = 20 \text{ OR } \underline{\hspace{10cm}} = 20$$

For each set of pictures, write the repeated addition sentence and the multiplication sentence that would also describe the picture. I have done the first one for you.

	
$2 + 2 + 2 + 2 + 2 = 10$	$5 \times 2 = 10$
	
	
	
	
	
	

For each set of dice, write the repeated addition sentence and the multiplication sentence that would also describe the dice. I have done the first one for you.

	
$3 + 3 + 3 + 3 + 3 = 15$	$5 \times 3 = 15$
	
	
	
	
	
	

For each multiplication sentence, write the repeated addition number sentence you could have. I have done the first one for you.

Multiplication sentence	Repeated addition number sentence	Gillian's challenge (below)
$5 \times 4 = 20$	$5 + 5 + 5 + 5 = 20$	
$4 \times 10 = 40$		
$8 \times 7 = 56$		
$3 \times 4 = 12$		
$12 \times 2 = 24$		
$6 \times 3 = 18$		
$2 \times 9 = 18$		

I think that there are 2 possible repeated number sentences for each multiplication sentence...can you find the 2nd possible addition number sentence for each?
