Parts of a Flowering Plant

Living things are made up of different parts. As humans we have body parts; legs, arms, elbows, a head. Some animals have different body parts; a shark has a fin, fish have gills, a horse has a set of hooves. Plants are also living things and their structure is made up of different parts. Each part has a very important role to play in the survival of the plant.

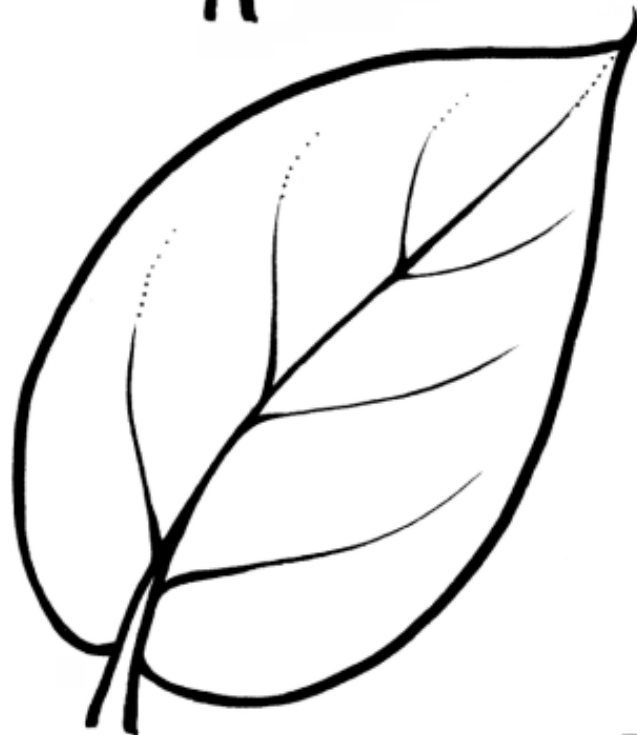

Use this weblink to find out some information about the parts of a flowering plant before completing your work below.

<https://www.bbc.co.uk/bitesize/topics/zpxnyrd/articles/z3wpsbk>

Using the template provided, or get creative with other things you have at home, create your own flowering plant. If you don't fancy an afternoon of cutting and sticking you could always draw your own picture of a flowering plant. Once you have finished, add on the name labels and tell me about the job each part has. Take a photograph of your finished plant and upload it to OneNote.
