

Watch the video of Miss Brearey weighing different objects, pausing when she tells you to write down your estimates! If you have the mentioned objects at home, it would be good if you could feel them in your hands, comparing them to the other objects- is it heavier or lighter?

If you have your own weighing scales at home, choose a few items of your own to estimate and then weigh, including them on your table in the empty rows.

Sketch of Item	Estimated Mass	Actual Mass
