

Einstein valued imagination above science for he believed that: 'imagination is more important than knowledge'.

Knowledge is limited and can be found out, but imagination will bring new discoveries and new thinking. Without it we are lost!

We're going to help develop some of that imagination by playing some more poetry games using inspirational starting points.

For instance, look at this picture, the Mona Lisa by Leonardo de Vinci. Let's brainstorm some 'what ifs'.....

WHAT IF....

The Mona Lisa—
began to sing like Kylie Minogue,
yawned loudly,
asked the way to the shops,
wrinkled her nose,
ate a double cheeseburger and fries,
took her dog for a walk,
went to live in Barnsley?

Now, look for inspiration around you, you could:

- take a picture from a book
- find a word to start from by closing your eyes and let your fingers drop onto the page of a book
- use a website like Pobble365 to find an image...
- use a piece of art

Have a go! Here's mine...

What if....

A volcano did erupt yellow,
All the colours of the rainbow,
Glow-in-the-dark neon at night,
A light show to behold,
Rumbles change to dance beats,
Glitter clouds and plumes of chalk,
Acrylic lava flows to cover you in joy,
Lumps of dried up glue,
The volcano covers us all in happy colours,
And changed our day for sure,
The world might be a happier place,
For a little more colour in our lives.
